SAP Fiori elements & tools

SAP Fiori covers several dimensions

SAP Fiori covers several dimensions

We will focus on building SAPUI5-based web apps using SAP Fiori elements and SAP Fiori tools

Scaling app development with SAP Fiori elements and SAP Fiori tools

SAP Fiori elements dynamically generates SAP Fiori apps at runtime based on backend services and metadata.

SAP Fiori Tools makes the SAP Fiori elements easily approachable, to build and extend SAP Fiori elements-based apps.

Both accelerate consistent app development and AI integration.

Over 100K apps created this year to enhance SAP Business Suite.

1 Learn the basics

Reusable artifacts for standardized layout patterns or interaction behaviors to provide enterprise readiness, support UI consistency, and boost developer efficiency as part of the SAP Fiori elements framework and additional flexibility through SAPUI5.

SAP Fiori elements
Building Blocks

SAPUI5

2 Choose your starting point

Depending on your target picture choose among floorplans for standardized layouts or custom pages with building blocks or freestyle SAPUI5 page to provide maximum flexibility.

Floorplans

Custom Page
with Building
Blocks

Freestyle
SAPUI5 Page

3 Combine SAP Fiori elements and freestyle SAPUI5

To combine freestyle SAPUI5 code with SAP Fiori elements you now have the full flexibility to either use both in extension points of your floorplan or add the custom pages you built with building blocks or completely go freestyle SAPUI5.

SAP Fiori elements provides enterprise readiness from the start

List Report

Readiness features

- Accessibility
- Internationalization
- Mobile compatibility
- Responsiveness
- Performance optimizations
- Integration
- Security checks
- Lifecycle stability
- Test automation support
- And more

Tools for AI-powered development

Challenges of using AI in a development project

- LLM uses outdated information
- LLM lacks specialized access to resources
- LLM creates artefacts from scratch
- LLM does not use domain specific best practices
- LLM generates code which does not work

Model Context Protocol (MCP) servers – offer expertise to LLMs

Tools	Help with creation, modification of artefacts, provide access
Context	Information about projects and related objects
Guidance	Up-to-date documentation and best practices for AI-assisted development tasks

→ Goal: reduce errors, iterations, and token-usage

MCP servers from SAP for developers

Availability as

- open source, node module (CAP, UI5, SAP Fiori, MDK),
 - Claude plugin (UI5, SAP Fiori)
 - Pre-installed in SAP Business Application Studio
- part of ADT for VS Code extension (ABAP)

MCP server for CAP

- Development of CAP applications

ADT MCP server

- Create and administer ABAP artefacts

MCP server for SAP Fiori

- Create or modify SAP Fiori elements applications

UI5 MCP server

UI5 Web Components MCP Server

- Creation of new UI5 projects
- Detect and fix UI5-specific errors in the code
- Development of Web Applications with UI5 Web Components

MCP server for mobile development kit (MDK)

- Create or modify MDK based mobile apps

ABAP Development Tools for VS Code

- Available on the [VS Code marketplace](#)
- Supports backends from SAP NetWeaver 7.3 EHP1 SP04 or higher
- First version focuses on RAP UI service development. Includes MCP server supporting ABAP development via AI agents
- See [announcement blog post](#) and [roadmap](#) for more information on the next releases

```
1 interface;
2 extensible;
3
4 with privileged mode;
5
6 define behavior for I_SalesOrderTP alias SalesOrder
7 use etag
8 {
9     use create;
10    use update;
11    use action CreateWithReference;
12    use action CreateItemWithReference;
13    use action UpdatePrices;
14
15    use event Created;
16    use event Changed;
17    use event Deleted;
18
19    field ( readonly ) SalesOrder, ReferenceSDDocument;
20    use association _Item { create; }
21    use association _Partner { create; }
22    use association _Text { create; }
23    use association _PricingElement { create; }
24 }
25
26 define behavior for I_SalesOrderPartnerTP alias SalesOrderPartner
27 use etag
28 {
29     use update;
30     use delete;
31
32     field ( suppress ) SalesOrganization, DistributionChannel, OrganizationDivision, Sale
33 }
```

MCP Server for SAP Fiori

- Enables Agentic AI in SAP Fiori Development
- Provides LLMs with
 - Structured access to project metadata
 - Executable functions for generating and modifying apps
 - Guidance for further app development tasks
- Open source and published to npmjs.com
- Also available as Claude plugin

[Announcement blog](#)

Skills

What are Skills?

- Encapsulated capabilities combining prompts, logic, and optionally tools
- Focused on how to solve a task (reasoning, orchestration, domain logic)
- Reusable entities for common user intents

What are Skills used for?

- Structuring and guiding AI behavior for specific use cases
- Orchestrating multi-step workflows (plan → call tools → synthesize results)
- Improving consistency, reliability, and reuse across scenarios

Skills = “How to do the task” (logic + orchestration) vs.

MCP Servers = “What you can use” (tools + data access)

Demo

Outlook

- More integrations ABAP, SAP Fiori tools planned, e.g. cross-navigations, connection manager
- Collection of base skills for SAP Fiori elements development is in the works
 - First: `sap-fiori-analytical-chart` and `sap-fiori-add-visual-filter`
- Interface restructuring of the MCP server for SAP Fiori, to be ready for
 - Smooth SAP Business Application destination support
 - Adaptation project support within MCP for SAP Fiori – soon (UI5Con)
- Added expertise for OPA5 to the MCP for SAP Fiori doc search tool – more to come
